

## Q5 SMS Version 7.0 Release

With customers across the globe and an established name in the aviation industry, Q5 Systems is proud to release their latest version of SMS software which has further evolved to meet the needs of its users.

John Lukins, partner and owner says "Version 7.0 boasts several significant enhancements to the way the software can be customized and will ensure our clients are using the software more efficiently. We are constantly taking in feedback from our clients and applying the latest technologies to ensure we meet their wants and needs."

### **Document Management Module**

The Document Management Module is a document repository for your organizations key information. It allows for instant access to important documents, procedures and manuals for all personnel. Its key features and benefits are:

- Access Documents: Upload all documents to a central library where they are easily filtered and accessed by employees across your organization.
- Ensure Accurate & Up-To-Date Information: Ensure the most recent and up-to-date versions of documents are being used across your organization.
- Increase Efficiency: Store all of your organizations documents in one location where they are easily retrieved.

### **Enhanced Event Reporting**

Event Reporting has been improved too allow for easier navigation and to ensure proper work flow procedures. The *event targeted form* will facilitate in customizing event reports for the collection of additional data. Its key features and benefits are:

- Filter: Drill-down and filter through event fields to define your reporting parameters
- User Friendly: The event targeted form is an intuitive, user-friendly tool that will guide the user through the reporting process
